

2022-02-22 | Installation on multi-user systems

Coolselector[®]2 Server Installation Guide

Easy and time saving calculation and component selection.

We did complex – **you do awesome**

System requirements

Coolselector®2 runs on Microsoft Windows 7 or later. In case you need to install Coolselector®2 on computers configured differently, you have two options:

1. Use <http://coolselectoronline.danfoss.com> for an online experience.
2. Contact us at coolselector@danfoss.com for installation support on older configurations.

Multi-user systems

Coolselector®2 should only be installed on multi-user systems by qualified personnel. The command-line switches for the setup program listed below might be useful for such installations:

- /VERYSILENT
No message boxes, confirmations, etc.
- /MERGETASKS="!desktopicon,!startmenu"
No icons in start menu or on desktop
- /ALLUSERS
Install icons for All users instead of current user (default). Requires the installation to be run with administrative privileges.
- /DIR="x:\dirname"
Overrides the default directory name. A fully qualified pathname must be specified. May include an "expand:" prefix which instructs Setup to expand any constants in the name. For example: "/DIR=expand:"{pf}\My Program"" will install into "Program files (x86)\My Program" folder. Note that depending on folder, installation might require administrative privileges.
- /NoAutoUpdate
Prevents Coolselector®2 from trying to automatic check for updates

Command line example:

```
setup.exe /VERYSILENT/MERGETASKS="!desktopicon,!startmenu"  
/DIR="c:\Coolselector2" /NoAutoUpdate
```
